How to Use This Book	3	Unit 6	How to Solve Word Problems Involving Fractions	25	
NCTM Standards	4		Practice Solving Word Problems Involving Fractional Parts	26	
Unit 1			Practice Solving Word Problems That Compare and Measure Fractional Parts	27	
How to Apply Problem-Solving Strategies	5		Practice Solving Word Problems Involving Fractional Measurements	28	
Practice Reading and Understanding Problems	6	Unit 7	How to Solve Word Problems Involving Geometry	29	
Practice Applying a Problem-Solving Plan	7		Practice Solving Word Problems Involving Geometric Shapes	30	
Practice Checking for Reasonable Answers	8		Practice Solving Word Problems Involving Geometric Computations	31	
Unit 2			Practice Solving Directional Word Problems	32	
How to Solve Numerical Word Problems	9	Unit 8	How to Solve Multi-Step Word Problems	34	
Practice Determining the Operation to Solve Word Problems	10		Practice Solving Multi-Step Word Problems	35	
Practice Applying Numeration Skills to Solve Word Problems	11		Practice Solving Multi-Step Word Problems Involving Money	36	
Practice Using Patterns to Solve Numerical Word Problems	12		Practice Solving Multi-Step Word Problems Involving Measurement	37	
Unit 3		Unit 9	How to Solve Algebraic Word Problems	38	
How to Estimate to Solve Word Problems	13		Practice Solving Word Problems Involving Exponents	39	
Practice Applying Estimation Skills to Solve Word Problems	14		Practice Solving Word Problems Involving Algebraic Equations	40	
Practice Estimating Money Word Problems	15		Practice Solving Algebraic Word Problems with Patterns	41	
Practice Estimating Word Problems with Decimals	16	Unit 10 (Real Life)	Word Problems in the Produce Aisle	42	
Unit 4			Unit 11 (Brain Teasers)	Where in the World is Irvin?	43
How to Solve Word Problems Involving Measurement	17		Unit 12 (Technology)	Internet Movie Link	45
Practice Solving Word Problems Involving Linear Measurements	18		Hyperlink Word Problems	46	
Practice Solving Word Problems Involving Volume and Capacity	19		Answer Key	47	
Practice Solving Word Problems Involving Weight and Mass	20				
Unit 5					
How to Solve Word Problems Involving Time	21				
Practice Solving Word Problems Involving Elapsed Time	22				
Practice Solving Word Problems That Compare and Measure Time	23				
Practice Solving Word Problems That Require Time Conversions	24				

Directions: Use what you learned on page 13 about rounding and front-end estimation to solve the following word problems that deal with money.

Jean's parents have given her \$100.00 with which to decorate her room. She excitedly combs through magazines and catalogs to find the best prices on the items she wishes to

Without using paper, pencil, or a calculator, does Jean have enough to buy . . .

1. the paint, border, blanket, bedspread, and pillows? _____
2. the ceiling fan, wall hanging, lamp, and chair? _____
3. the stuffed bear, bedspread, and paint? _____

List three possible combinations of items Jean may select with which to spend her \$100.00.

4. _____
5. _____
6. _____
7. Roger likes to buy a milkshake at lunch three days each week. Milkshakes cost \$1.25 each. About how much money does Roger spend each month? (**Hint:** There are about four weeks in each month.) _____
8. Farley dumps his piggy bank. He estimates that he has between 10 to 14 quarters, 25 to 29 dimes, 14 to 18 nickels, and 40 to 60 pennies. About how much money does Farley have? _____

••••• Solving Algebraic Word Problems with Patterns

Directions: Use what you learned on page 38 to continue the T-chart patterns. Then solve for the unknown quantity.

Beatrice builds cubes with large marshmallows (m) and straws (s). For each cube she needs 8 marshmallows and 12 straws. The chart shows her progress as she continues to build cubes. Fill in the chart for the next three builds.

- How much do the m values increase with each cube? _____
- How much do the s values increase with each cube? _____
- How many marshmallows does Beatrice use with the unknown s quantity?

- Use the algebraic equation to solve for s . _____

m	s
8	12
16	24
24	36
—	—
—	—
—	—
80	s

$$s = 3 \times \frac{1}{2} m$$

Rafael builds a geometric dome using clay (c) and toothpicks (t). He starts with 4 clay balls and 6 toothpicks. He adds 2 clay balls and 3 toothpicks each time as he makes it bigger. The chart shows his progress and the pattern. Continue the pattern for the next three additions.

- How much do the c values increase each time? _____
- How much do the t values increase each time? _____
- How many clay balls does Rafael use with the unknown t_1 quantity?

- How many clay balls does Rafael use with the unknown t_2 quantity?

- Look at the pattern between the two values. Write an algebraic equation showing the relationship between t and c . _____
- Use your equation to solve for t_1 . _____
- Use your equation to solve for t_2 . _____

c	t
4	6
6	9
8	12
10	15
—	—
—	—
—	—
20	t_1
50	t_2
