Answer Key	79

Story Sequencing

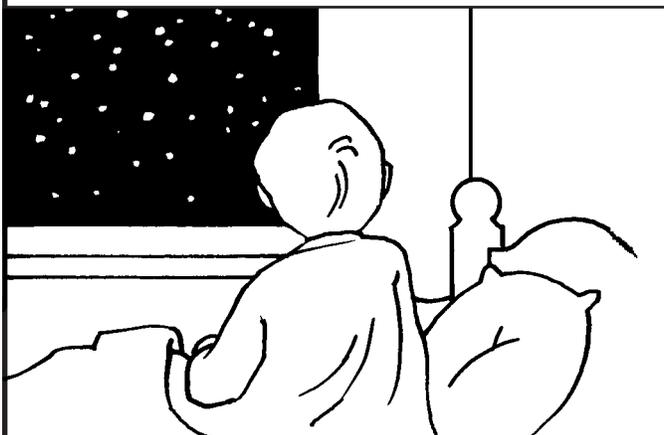

Look at the illustrations and read the six sentences. Cut apart the illustrations and glue them onto a new piece of paper in the correct story order.

Louis couldn't fall asleep.

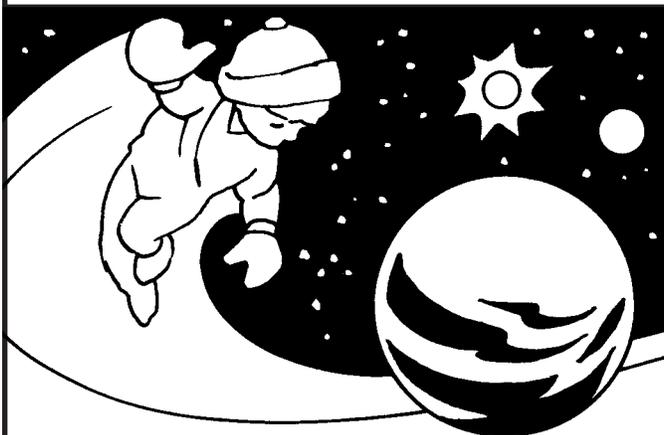

Louis traveled past Pluto.

Louis looked at the night sky.

He saw a twinkling planet in the sky.

He traveled past Venus.

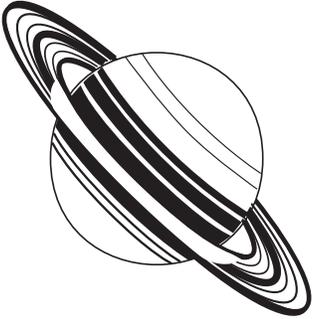

Louis came home and went to sleep.

What's in a Name?

Do you have a nickname? People and pets are often given nicknames that describe them. Some of the planets have nicknames, too.

Read each planet description and cut and paste the nicknames above its illustration and description.

 <p>1. Jupiter is the largest planet. It is about as big as a small star. It is much, much larger than Earth.</p>	 <p>2. Mars is known for its color. The dirt on Mars is a reddish color.</p>
 <p>3. Venus is very much like Earth. The two planets are alike. Venus is also almost the same size as Earth.</p>	 <p>4. From space, Earth looks like a blue ball. Many people think it looks like a marble.</p>
 <p>5. Saturn is known for its rings. Other planets have rings, too, but Saturn's rings are very easy to see.</p>	 <p>6. Pluto has a large moon. The moon is almost the same size as Pluto. Scientists say that they look like two planets together.</p>

Nicknames:

The Double Planet	Earth's Twin	The Ringed Planet
The Red Planet	The Big Blue Marble	The King of Planets
