Mummies in Ancient Egypt

Week 2: Tuesday

Reading

Directions: Read the passage, and then circle the correct answers.

Thousands of years ago, people in Ancient Egypt thought that dead people needed their bodies after death. They believed that the people continued to live in a place called the afterlife, so they found a way to keep dead bodies from rotting. They figured out how to turn dead people into mummies. They **preserved** most of their kings and queens this way.

It was a lot of work to make a mummy. First, priests washed the dead body. Then they removed all of the organs—even the brain! They put a kind of salt all over the body. After six weeks, the body completely dried out. Next, they stuffed the body with sand, sawdust, or cloth. This made the body look full again. Then they rubbed spices and oils into the skin. Finally, the priests wrapped cloth strips tightly around each part of the body. Wrapping the body took about two weeks. Lastly, they put the body into a coffin. On its cover, the coffin had paintings and sometimes gems.

The most famous mummy is King Tut. He was still a teenager when he died over 4,000 years ago. He was put into a secret tomb. Scientists found this tomb in 1922. His family had put all sorts of gold, gems, and other riches into his tomb. Inside, King Tut's mummy lay in a solid gold coffin. Even his sandals were made of solid gold.
