

Teeny Tiny Frogs

Tree frogs are only as long as your little finger.

Hard to See

When a tree frog sleeps on a leaf, its green coloring makes it hard for other animals to spot it.

TREE FROGS
SLEEP DURING
THE DAY. AT
NIGHT, THEY HUNT
FOR INSECTS
TO EAT.

Surprise

If an enemy comes too close, a sleeping tree frog pops up. Its bright colors may **startle** the attacker long enough for the frog to get away.
